**\*Round up to the next 5 mile increment. Example: A van traveling 23 miles round trip, would round up to 25 miles. Monthly fare is set at \$341.51.**

The commute miles a van travels will fluctuate from month to month based on the number of working days in a particular month. Fares are calculated with the assumption that the vanpool is commuting an average number of 21 business days per month. Some months have as little as 19 days and some as many as 23. As an example: A van traveling 20 miles round trip will fit into the 420 miles per month rate, based on a 21 day month. (21 days X 20 miles = 420 monthly miles) The mileage will fluctuate between 380 miles for a 19 day month to a maximum mileage ceiling of 460 for a 23 day month commute, but the rate remains at the 420 mile average. A change in monthly average miles could occur due to a route change or other factors which would place the group into different monthly mileage band. If commute miles were figured at 23 daily round trip miles, rounding up to the next 5 mile increment, the van would pay at the 25 miles round trip rate. If a route change occurred bumping the daily RT miles to 27, a rate change would occur placing the van in the next higher, 5 mile increment of 30 miles round trip. Staff will also evaluate mileages at regular intervals for incremental fare adjustments
