Logic Model Descriptions

Situation

This is a description of a challenge, issue, or an opportunity the program's resources and activities will be addressing. The situation will be used as a basis to explain activity direction and the overall goal seeking to be achieved by the program.

Inputs

These are resources that contribute to the program's activities. There are human resources (i.e., faculty, staff, drivers, etc.) and financial resources (i.e. federal, state and local government, private funding, etc.). These are programmatic investments available to support the program.

Output Activities

These are the integrated efforts to address the situation and to highlighting those activities that were instrumental in the achievement of the program's goals. This is critical to the full evaluation of the program because it provides an answer to the situation and explains the outcomes.

Output Participants

Participants, clients, organizations, agencies, decision-makers, and/or customers reached by the activities.

Outcomes Short

This occurs when there is a change in knowledge, awareness, opinions, and intent. This also where you will identify performance measures for when services are provided, and metrics are recorded.

Outcomes Medium

This occurs when there is a change in behaviors, decision-making, and actions. These changes demonstrate how the knowledge gained or increased has been used.

Outcomes Long

This occurs when there is a change in conditions and experiences that have been a result of the changed behaviors and services provided.

Assumptions

These are beliefs about the program, people involved and how the program is perceived to work. Assumptions include ideas about the program or situation; the resources and staff; the external environment; the knowledge base; and the internal environment.

External Factors

These are aspects external to the program that influence the way the program operates and are influenced by the program. Elements that affect the program over which there is little control.
